

We are right in the middle: Welcome to Vechta!

Vechta is the non-declared capital of the Oldenburger Münsterland. This region is considered to be the centre of German's economy of refinement. Here, one is familiar with the needs of animal husbandry and with the requirements of the market. And here, one is conscious of the responsibilities towards both animal and human health.

We got the technical equipment and know-how on-site.

If you develop, mix and package yourself, you need equipment meeting highest standards. We trust in the well-proven machines of the Dinklage specialist constructor company Alwid who built our dose-filling, stirring and auto-sealing equipment.

- Machine Alwid I A
- Machine Alwid II B
- Stirring Device 500 L A I
- Own packaging lines
- Own storage facilities and distribution
- Storage capacities: dust-free and consistent with highest hygienic standards
- Local Laboratory support

The most important
thing is health.
GUARANTEED!

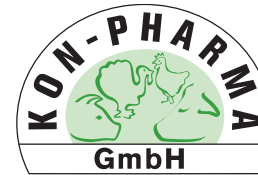

We produce premium feed additives. Products with your label as well.

Kon-Pharma is a service provider in the best sense: Our self-concept is that of a service partner all-around dedicated to the needs of our customers. In our up-to-date production facilities we do not only manufacture our own product line but develop custom-designed recipes of our clients. These recipes may be processed into marketable standard products or special application products.

Our offer:

- Exclusive development of customised recipes of our clients
- Optimisation of recipes/compositions
- Optimisation of production processes
- Optimisation of analytical parameters
- Product maintenance and further development
- Optimisation of processes
- Stability testing
- Procurement of specimen/samples
- Validation of production processes and analytical methods
- Development of packaging processes and packaging design
- Packaging and labelling

We are fast. And we are very flexible.

Due to our almost 20 years of experience and competence in veterinary medicine, we are in the position to offer a comprehensive programme regarding development, design and manufacture of liquid animal feed additives, which will help you to be ahead of your competitors.

Benefit from our services:

- In-house development procedures
- In-house manufacture
- Filling procedures starting with 100 mL up to bulk containers
- Bottles, canisters and bulk containers with screwtop closures
- Labels at all formats
- Batches: 6-digits, continuous
- Storage under controlled climatic conditions (8 to 25 °C)
